

The "Labor efficiency" national project was implemented at the Osinnikovsky Machinery and Repair Plant (ORMZ)

February 24, 2022 - The Osinnikovsky Machinery and Repair Plant of the Rospadskaya Coal Company (RUK manages the coal assets of EVRAZ) has been participating in the national project since the fall of 2021. With the help of lean technologies, the company was able to increase the volume of production of high-demand industrial products.

The experts from the Regional Competence Center (RCC) have been working at the plant for four months. They have strengthened the team of Business system development specialists. Among the priorities was to increase the manufacture of rope bolts (AKR-15), one of the main types of products of the enterprise. Prior to the start of the project, the production volumes were 142 rope bolts per day, now they have been increased to 191 rope bolts per day.

Optimization of the production process allowed to increase production volumes, improve product quality and strengthen market positions. This did not require additional investments in expansion and modernization. The expert support for enterprises is free of charge and is provided within the framework of federal support for the national project.

ORMZ produces metal structures and mining equipment. The plant fully meets the needs of the RUK enterprises in high-quality products, which achieved certification at the VostNII Scientific Institute in 2020.

About the Company

Raspadskaya Group comprises enterprises of a single territorial production complex in Kemerovo Region and the Republic of Tuva of the Russian Federation: eight mines, two open-pit mines, three processing plants, transport and industrial infrastructure enterprises. Is part of EVRAZ, a vertically integrated mining and steelmaking business.
